

Forklift Fork Positioners

Fork Positioner for Forklifts - A fork positioner is actually a device constructed out of high quality materials meant to endure the most challenging operations and work environments. This particular piece of equipment enables the one driving to be able to maneuver the forks hydraulically without leaving the seat. Side shifting models have the extra ability to laterally position the arms or the entire load in order to facilitate much more accurate lifting and position in a faster and much more effective method.

The blade pocket is rather unique and can enable the person operating it to be able to securely swing the blades into position without any fear of destroying the positioning cylinders. This allows the driver the alternative to be able to perform independent or simultaneous fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be converted into fork positioners on existing units.
