

## Carriage Rollers

Carriage Roller - Carriage rollers are specifically designed bearings that are utilized on lift masts to be able to help them function within difficult environmental surroundings. Lift masts are often subjected to oscillations, shocks, vibrations and high dynamic and static loads. This equipment is regularly exposed to environmental influences like heat, dust, cold, contamination, aggressive ambient air and moisture. Hence, the guidance arrangements of lift masts need to be specifically robust and have a specific high load carrying capability.

So as to help compete in numerous different environmental conditions, carriage rollers were designed for numerous lift masts. While having the ability to deal with a specifically high load carrying capacity, these bearings provided an economical operational security for the guidance arrangement of the lift masts.
